## **DEOX & FIT**

### **Environmentally friendly stainless steel deoxidation and re-passivation**

Deox & Fit is the Nitty-Gritty idea allowing the deoxidation and re-passivation of stainless steel. Designed for those who need to intervene during the process.

Deox & Fit is easy to use : first, you rub the Deox wipe on the stainless steel parts to be treated (in a few seconds the oxydations on the stainless steel surface will disappear) ; then you spray the Fit component, which will act both as a neutralizer and as a restraint of future corrosive phenomena; finally, you remove the Fit component with a dry cloth. Three quick steps to make the treated surface shine, without oxidations, perfectly protected, as good as new.
